User Story Title: Wallet

1. Description

As an admin user, I want to manage client wallets from the **Wallets** tab under the Accounts module so that I can generate wallets when none exist, view wallets by blockchain network, withdraw funds to the operations wallet, and configure crypto network fees using predefined or custom fee profiles. The Wallets tab supports wallet creation, network-wise wallet views, transaction visibility, withdrawals, and fee configuration.

2.Pre-Conditions

- Admin user is logged into the platform.
- Admin has access to the Accounts module.
- A client account is selected.
- Blockchain wallet services are available.
- Fee profiles are preconfigured in Settings.
- USDT and USDC tokens are supported.
- Transaction module is accessible to the admin.

3. Requirement Flow

3.1 Navigation

- Admin navigates to **Accounts → Wallets**.
- Wallets tab loads based on wallet availability:
    - If no wallet exists → Create New Wallet state is shown.

- If wallets exist → Network tabs and wallet details are shown.

3.2 Search & Filters

- Search bar is available above the transaction grid.

- Filter icon opens the **Filters modal**.
- Filters can be applied individually or in combination.
- Reset option clears all applied filters.

3.3 Pagination

- Pagination activates when >10 records exist:

- Records Per Page (RPP) options: 10, 25, 50, 75, 100
- RPP Change: Immediately updates records shown, total pages, and persists selection across all pages
- Controls: First/Previous/Next/Last page buttons + current page indicator (e.g., "Page 2 of 5")
- Default: 10 records per page
- Filter Persistence: Pagination state maintained across filter changes.

3.4 Grid Columns

Column Name	Description
Status	Displays the current transaction status (e.g., Pending Compliance, Pending SP, Completed, Pending Clearance, On Hold Compliance, Declined)
Created Date	Date and time when the transaction was created
Transaction ID	Unique transaction reference number (clickable for navigation to transaction details)
Beneficiary	Name of the beneficiary associated with the transaction
Amount	Transaction amount with sign indicator (+ / −)
Debit / Credit	Indicates whether the transaction is a debit or credit
Currency	Token currency used in the transaction (USDT / USDC)
Wallet Network	Blockchain network used (ERC20 / TRC20)
Completed Date	Date and time when the transaction was completed (if applicable)
Tag	Optional tag or label associated with the transaction

Note

- **Status** is color-coded based on transaction state.
- **Transaction ID** is clickable and redirects to the Transaction Details module.
- **Amount** displays positive (+) for credit and negative (−) for debit.
- **Completed Date is the** Date when transactions is completed.
- **Tags are** optional and added by admin.

3.5 Actions & Functionalities

3.5.1 Wallet Creation

- **Create New Wallet** button is displayed when no wallet exists.
- Clicking **Generate Wallet** opens the Setup Wallets modal.
- Two networks are generated on confirmation:
    - ERC20 (Ethereum)
    - TRC20 (TRON)
- After generation, two network tabs are displayed.

3.5.2 Network Wallet View

- Each network tab displays:
    - Wallet address
    - Wallet status (Active)
    - Token balances (USDT, USDC)
- Admin can switch between ERC20 and TRC20 tabs.

3.5.3 Withdraw to Operations Wallet

- **Withdraw to Operations Wallet** button is displayed per network.
- Clicking opens a withdrawal modal.

Withdraw Modal Fields

Field Name	Field Type	Mandatory	Validation
Token Selection	Radio (USDT / USDC)	Mandatory	One selection required
Amount	Numeric	Mandatory	Must be > 0
Description	Text Area	Optional	Max length enforced

- On submit, withdrawal request is processed.

3.5.4 Crypto Network Fee Configuration

- **Crypto Network Fee** button is displayed per network.
- Clicking opens the fee configuration modal.

Fee Configuration Behaviour

- Admin selects a **Fee Profile** from dropdown.
- Fee values (Base, Percentage, Min, Max) auto-populate based on selected profile.
- Admin can enable/disable fee application per token (USDT / USDC).
- If admin edits any fee value manually:
    - Fee Profile selection is cleared
    - Configuration is treated as **Custom Fee**

Fee Fields

Field Name	Field Type
Base Fee	Numeric
Percentage Fee	Numeric
Minimum Fee	Numeric
Maximum Fee	Numeric

3.6 transaction Filters

Filter Name	Field Type	Behaviour
Wallet Network	Dropdown	Filter by ERC20 / TRC20
Currency	Dropdown	Filter by USDT / USDC
Created Date	Date Picker	Filter by transaction creation date
Completed Date	Date Picker	Filter by transaction completion date

Filter Actions

- **Apply Filters**: Updates transaction grid
- **Cancel**: Closes modal without changes
- **Reset Filters**: Clears all applied filters

3.7 Transaction ID Navigation

- **Transaction ID (TID)** is clickable in the grid.
- Clicking TID redirects the admin to the **Transaction Details module**.

- Corresponding transaction opens.
- Admin can navigate back to Wallets with context retained.

3.8 Export / Download Transaction Data

- **Download / Export** option is available above the transaction grid.
- Admin can export **currently visible grid data** (respecting applied filters).
- Supported export formats:
  - **Excel (.xlsx)**
  - **PDF (.pdf)**

Export Behaviour

- Export includes only filtered and searched results.
- Exported file contains all visible grid columns.

3.9 Form Details

Field	Type	Mandatory
Network Selection (ERC20)	Auto-selected	Yes
Network Selection (TRC20)	Auto-selected	Yes

3.10 Error & Empty States

- Empty state shown when no wallets exist.
- Error shown if wallet generation fails.
- Error shown if withdrawal amount exceeds balance.
- Error shown if fee configuration save fails.

4. Validations & Business Rules

4.1 Field-Level Validations

- Withdrawal amount must be numeric and greater than zero.
- Fee values must be valid numeric values.
- Token selection is mandatory for withdrawals.

4.2 Action-Level Validations

- Wallet generation allowed only once per client per network.
- Withdraw action blocked if balance is insufficient.
- Fee save allowed only when at least one token fee is enabled.

4.3 Status-Based Rules

- Wallet must be Active to allow withdrawals.
- Fee changes apply immediately after save.

4.4 Role-Based Rules

- Only Admin / Super Admin can:
    - Generate wallets
    - Withdraw funds
    - Configure network fees

5. Acceptance Criteria

Given an admin user navigates to the Wallets tab for a client account,
When the admin generates wallets, views network-specific wallet details, withdraws funds to the operations wallet, or configures crypto network fees using profile-based or custom values,
Then the system should correctly create wallets, process withdrawals, apply fee configurations, and display accurate wallet and transaction data.

6. Post-Conditions

- Wallets are created and activated.

- Withdrawals are initiated successfully.
- Fee configurations are saved and applied.
- Transaction records are updated.

7. Impacted Areas

- **Accounts UI (Admin)** – Wallet and transaction management.
- **Wallet Service** – Blockchain wallet generation.
- **Transaction Service** – Withdrawal processing.
- **Fee Management Service** – Network fee calculation.
- **Audit Logs** – Records wallet, withdrawal, and fee actions.

8. Notes / Assumptions

- Wallet addresses are linked to a master wallet.
- Blockchain confirmations are handled asynchronously.
- Fee profiles are managed in Settings.
- Custom fee overrides do not affect saved profiles.
- Token support may expand in future iterations.
